Mobile Imaging Station™
…the "Versa-*Scan*Cart™"

The Versa "Mobile Imaging Station", or "Versa-*Scan*Cart™" was developed to fill a void in the document imaging and image conversion market place. Standard document imaging practice today is to bring documents to stationary installed document scanning centers (in-house or commercial, off-site scanning service bureaus) or to purchase small volume tabletop scanners for most or all users on a computer network. With desk space at a premium, placing individual scanners onto every desk is not practical or cost effective. Versa-*Scan*Cart's allow users to "roll" complete scanning and "mobile image conversion" stations to business locations where critical or excessive number of paper documents are present.

This process is especially valuable for companies that are planning to move to new facilities that usually offer smaller and more restrictive floor and desk work space per employee.   Multiple Versa-*Scan*Cart's can be deployed before the move to quickly convert documents to text searchable PDF CD's, reducing bulk storage by 98 percent. Each Versa-*Scan*Cart™ can transfer images via its wireless interface, to VersaIMAGE software loaded on a network! Document images may then also be made available for access over the Internet using a standard browser!

One of the many benefits of this process is that document conversion labor is distributed to the many users who know best how the information needs to be scanned and indexed. Depending on the number of inexpensive Versa-*Scan*Cart's used, Large number of individual document areas can be quickly converted without the customary logistics hardship that involves boxing up documents for off-site storage or image conversion.

*"Mobile Imaging Station" Versa-Scan*Cart™ Features:

- Allows "rental" or "lease" business application use.
- Contains scanner (available for Low, Medium, High speed & Large Document scanning), computer system, Removable back-up drive and <u>extremely simple to use VersaIMAGE automatic text indexing and retrieval software with CD production capability!</u>
- <u>I</u>nternet connection for program updates and custom modifications.
- Optional document shredder module
- Adjustable height of scanner workstation to fit operator requirements.
- Lockable casters on work station for easy mobility and stationary use.
- Removable scanning tray for quick exchange of scanner model.
- System may be configured for quick disassembly to allow SUV transport.
- Allows wireless scanning to client installed VersaIMAGE and VersaVIEW Network.
- Produces image text searchable PDF files or VersaView files on CD

- **"NO TRAINING NEEDED"** simple to use **VersaIMAGE-GOLD** imaging software:
  a. External Scanner Interface Module
  b. Twain Digital Camera Interface Module
  c. Batch Scan and "EZ-touch Folder Scan" Module
  d. Microsoft Access or SQL Database Management Module
  e. Database Application Development Module
  f. File Separator File Management Module
  g. OCR and Bar Code Zone Recognition for Auto Indexing
  h. Image OCR and "fuzzy" Full Text Search Module
  i. Redaction / Annotation Module
  j. Electronic Distribution Folder Management Module
  k. Fax, e-mail, print,
  l. VersaView CD Module
  m. Optional Intelligent PDF CD output Module
  n. Image PDF transfer Module
  o. Executable Viewer CD Writer Module
  p. Five level Security Module
  q. Retrieval and output activity audit log Module

Some of the Versa-*Scan*Cart™ benefits:
Simple to use VersaIMAGE Software requires NO training and makes it all possible!

- **Document** imaging of "on-location" paper files saves work-space immediately and provides full record security with an "off-site" security CD or tape copy!

- **Eliminates** boxing and moving of documents to conversion or storage facilities!

- **Documents** are secure, never "unavailable" due to conversion efforts and cannot be "lost" due to conversion or off-site storage process!

- **Saves money** by eliminating retrieval costs of boxes or files from record storage!

- **Eliminates** convenient and costly "box or file retrieval waiting" periods for needed documents and **saves money** by eliminating "long term" physical storage of documents!
