VersaIMAGE-GOLD™

Finally, powerful Document Imaging Software that's simple to learn…

The VersaIMAGE-GOLD™ Imaging Software is economical, extremely easy to use single or multi-user Windows document scanning and image management software. VersaIMAGE-GOLD uses the Twain scanner standard for color, gray scale and B+W paper scanning. The software provides Microsoft "Access" or "Sequel Server" database indexing and retrieval capability. Database search arguments may be coupled with OCR/ICR _full text search capability to provide quick retrieval to the individual document level_ within file folders.
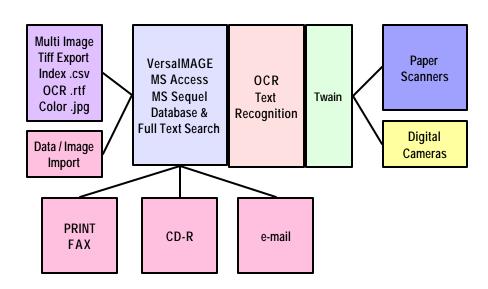

The software offers easy, "push-button" scanning, using computer keyboard function keys to allow computer novices to master the scanning process in minutes, eliminating costly customary imaging training time. VersaIMAGE-GOLD file folders may contain various image types such as digital camera color images (jpg & bmp), single and multi-image tiff images. Standard features include Index, OCR text conversion with full text search, image import / export modules, image distribution folders with output to file, CD, print, fax, e-mail in single and multi-image Tiff or jpg or bmp format. Bar code zone recognition is offered optionally.

VersaIMAGE-GOLD can be set up to automatically index each folder with the current scan date and image address. It allows folder name and description indexing from paper or digitally scanned images from zoom zones. Automatic database field indexing via bar codes that are matched with imported data files provides powerful "look-up-append" capability.

Important "Easy-key" features of the VersaIMAGE-GOLD edition:

- F-2 Scan first image into NEW Folder, allows "quick index" with zoom zones.
- F-5 Scan all additional documents, empties scanner feed hopper.
- F-4 Change scanner settings – displays TWAIN driver window.
- F-6 Re-scan image.
- F-3 Insert image "in front of" highlighted image on the screen

VersaIMAGE-GOLD ™

VersaIMAGE-GOLDä Features:

- **VersalMAGE-GOLD** edition requires Windows 98+, 512MB RAM, 1.0+ GB processor, 10GB+ disk space. Standard image file formats offered are Tiff, multi-image Tiff, JPG and BMP. Data formats are ASCII, CSV and RTF. The software may be downloaded from the VersaIMAGE.com website.

Standard Imaging modes:	Single image tiff/bmp/jpg – folder files
	Multi image tiff files
	Single image tiff/bmp/jpg – no folders
Twain Scanning modes:	Folder mode (F2, F5)
	Batch scanning with scanner control / separator targets.
Image editing:	Color Image annotation icons for text, highlight, stamping etc.
	Image editing functions for rotate, de-skew, de-speckle, crop, redaction and more.

- **VersalMAGE-GOLD** <u>contains TWO search engines:</u>
    - A unique "searchable" folder <u>database indexing</u> system that offers up to 20 index fields. The scan date may be inserted automatically and so may <u>imported data fields</u> that match the main index field data. All *scanned and imported* images will be in electronic folders or multi-image tiff format searchable via Microsoft Access or Sequel databases.   Text Fields (folder names, dates, descriptions, comments, etc) may be searched via "exact", "starts with" or "contains" search arguments, numeric fields allow partial input and range searches.

    - ***VersalMAGE-GOLD*** *generates a full text searchable* database from each image automatically via its integrated OCR/ICR text recognition engine. Use this feature to couple image text searches with database field searches. Database searches yield <u>folders</u> and OCR searches yield <u>documents</u> within the folders as long as the text is recognizable. The OCR recognizes text regardless of image format, image skew and rotation. OCR search allows for single word or word string searches connected with AND /OR arguments.

- **VersalMAGE-GOLD's** OCR files may be copied to the Windows clipboard, transferred or exported to MS Word, WordPad, WordPerfect or other text editors.

- **VersalMAGE-GOLD** scanned images may be transferred to external drives using the "floppy disk icon". The software allows printing, faxing, e-mailing of individual or multiple images located in folders or in multi image Tiff format. Single page or "thumbnail" print mode allows printing/faxing of multiple images onto the same page in the 9up thumbnail format (large enough to recognize the images). Image export functions allow transfer of index information with their respective color or black & white images and OCR text files to CD. VersaIMAGE files are industry standard imaging and text files and easily transferred to other imaging systems
